Garvin M;

Oram JF,

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) 1 gene. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangler disease, a genetic and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9q22-9q31. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia to screen for compounds that regulate the expression of genes associate with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia. Sequence 1643 BP; 370 A; 413 C; 457 G; 403 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates a nucleic acid which is capable of regulating the transcription of human APP-binding cassette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of colosterol metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances that are capable of modulating the transcription of the ABC1 gene. They are used in antisense therapy. Compositions comprising sequences of the invention are used to treat inventions are used to treat inventions. The present sequence is human ABC1 transcription regulating DNA.

used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human, ATP binding cassette transporter 1; ABC1; coronary heart disease; dermatological; atherosclerosis; cardiovascular; inflammatory disease; psoriasis; lipid disorder; antibacterial; septic shock; gene therapy; immunosuppressive; lupus erythematosus; rheumatoid arthritis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to four common polymorphisms in the gene encoding ATP-binding cassette transporter-1 (ABC1). ABC1 is associated with decreased ApoA-1 mediated efflux of cholesterol. The polymorphisms in ABC1 directly affects cellular lipid homeostasis, which is a key factor in the atherogenetic processes. The ABC1 polymorphisms are useful for diagnosing and treating lipid disorders, cardiovascular diseases
                                                                                                                                                                                                                                                                                                                                                       New adenosine triphosphate binding cassette transporter-1 gene polymorphisms, useful for diagnosing and treating lipid disorders, cardiovascular diseases and inflammatory diseases

No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intact 5' ends and can therefore be
                                                                                                                                                                                                                                                                                                                                                         2808 AGGAGAGCACAGGCTITGACCGATAGTAACCTCTGCGCTCGGTGCAGCCGAATCTATAA 2867

(coronary hear: disease, atherosclerosis) and inflammatory diseases (psoriasis, lupus erythematosus). The identification of ABC1 as a transporter for interlevin-lbeta (IL-lbeta) identifies this gene as a candidate for treatment of inflammatory diseases including rheumatoid arthritis and septic shock. The present sequence is human ABC1 gene.

triphosphate (ATP) binding cassette transporter 1 (ABC1) protein triphosphate (ATP) binding cassette transporter 1 (ABC1) protein case AMAT50227. The sequence includes an extended open reading frame (ORF) to that provided by the sequence in AAT70314, using an alternative ATG codon as initiation codon and thereby adding an extra 40 N-terminal amino acids to the encoded ABC1 protein (see AAM50228). The invention provides 4 common polymorphisms in the ABC1 gene. These were identified by sequencing the ABC1 gene in AAT70314), G is changed to A at position polymorphisms in the AAT70314, G is changed to A at position 596, T is changed to C at position 136, A is changed to G at position 3456, or any combination of these. ANI of these polymorphisms alter the amino acid sequence of ABC1 and therefore may affect its function. The 2 most common polymorphisms (G596A) and A2589G) are both associated with a decreased in vitro ApoA-1 mediated efflux of cholesterol from monourclear phagocytes, a feature typical of Tangler disease. 3 of the variants (G596A, A2589G and G3456C) are significantly increased in a population of established coronary heart disease. 3 of the variants (G596A, A2589G and G146A) eart for the diseases in a provided ABC1 polymorphisms for the diseases, and inflammatory closeases (CHD) relative to CHD free control subjects. The use of the provided ABC1 polymorphisms for the diseases, and inflammatory closeases (CHD) relative to CHD free control subjects. The use of the provided ABC1 polymorphisms for the diseases, and inflammatory closeases (CHD) relative to CHD free control subjects or ribosyme technology or RNA decoys is also and proper protein by antisense or ribosyme technology or RNA decoys is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      255 AAACCCCGTAATTGCGAGCGAGAGTGAGTGGGGCCGGGGACCCGCAGGCGGAGCCGAGCCGACCC 314

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                          The invention relates a nucleic acid which is capable of regulating the transcription of human ATP-binding cassette 1 (ABG1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholesterol metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances that are capable of modulating the transcription of the ABC1 gene. They are used to treat hypercholesterolaemia sequences of the invention are used to treat hypercholesterolaemia and atherosclerosis. The present sequence is human ABC1 gene exon lA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                    Isolated nucleic acid useful for modifying the ATP-binding cassette {\tt i} (ABC1) and screening for candidate modulatory compounds or substances
                                                                                                                                                                                                                                                              Gaps

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an obligo-dr primer and an obligonucleotide complementary transfor of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the complementary strand of a polynucleotides; or (b) a combination of a noligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises as 5'-end sequence, and an obligonucleotide comprising a sequence; where the complementary to a polynucleotide which comprises as 3'-end sequence, where the complementary to a polynucleotide comprises at least 15 nucleotides and the combination of the 5°-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the complementary full-length cDNAs. The primers are also useful for the complementary full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comptises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a conjugant comprises a 1-end sequence complementary to a polynucleotide comprises a 1-end sequence where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length. CDNAs. The primers are also useful for the particularly without any specialised methods. AAR03166 to AAR1328 and the cDNAs easily without any specialised methods. AAR03166 to AAR1328 and AAR030303 converses the control of the cDNAs and control of the cDNAs and control of the cDNAs are controlled to the cDNAs are contro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligocucieotides, all of which are used in the exemplification
                                                                      primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  q
                                                                                                                                                                                                                                                                                                                      The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligo-dride complementary to the complementary strand of a polyvuolectide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises a least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polyvuolectide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the optunicleotide which comprises a 3'-end sequence complementary to the oligonucleotide comprises at 3'-end sequence complementary to the oligonucleotide comprises at selected from the combination of the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynuoleotides, particularly full-length cDNAs. The primers are also useful for the particularly without any specialised methods. AAH03632 to AAH13632 and AAH13633 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to represent human animo acid sequences; and AAH13632 to AAH13632 or represent human animo acid sequences; and AAH13632 to AAH13632 or represent human animo acid sequences; and AAH13632 to AAH13632 or represent human animo acid sequences; and AAH13632 to AAH13632 or represent human animo acid sequences; and AAH13632 to AAH13632 or represent human animo acid sequences; and AAH13632 to AAH13632 or represent human animo acid sequences; and AAH13632 to AAH13632 or represent human animo acid sequences; and AAH13632 to AAH13633
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; cytokine; cell proliferation; cell differentiation; gene therapy;

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, homonomodulatory activities activity, issue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

ö
                                                      transporter 1 (ABC1) promoter capable of directing transcription of heterologous coding sequence positioned downstream to it. The hABC1 promoter is useful for expressing foreign DNA in a host cell, by introducing into the host cell a gene transfer vector comprising the promoter operably linked to a foreign DNA according a desired polypeptide or RNA, where the foreign DNA is expressed. The gene transfer can be introduced into the host cell by adenovirus infection, liposome-mediated transfer, topical application to the cell or microinfection. The gene transfer vector encodes and expresses a reporter molecule. The method further involves introducing into the cell or gene transfer vector comprising a nucleic acid segment encoding a transactivator protein capable of upregulating the ABC1 promoter, or contacting the cell with the transactivator protein.

                                                                                                                                                                                                                                     The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) 1 gene. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolloporotein mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangter disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 genes and proteins agencial consistency metabolism are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.
Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1394 GGGCCCCGGCTCCACGTGTTCTGCTGAGTGAACTACATAAACAGAGGCCGGGAA 1453

The present sequence represents the 5' fianking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) I gene. ABCI caesides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular choiserrol stores. ABCI is defective in Tangler disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9422-9431. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and cother disorders associated with hypercholesterolemia.

                                                                                                                                                                                                                                                                           diagnosed as having a lower than normal high density a parky lipoprotein-choiesterol (HDL-C) level, a higher than normal trigiveride level, or a cardiovascular disease, involving administering a compound that modulates LNR- or RNR-mediated transcriptional activity or ABC1 expression or activity. The LNR gene product may be used in an assay to identify compounds useful for the treatment of a disease or conditions lower than normal HDL cholesterol level, a higher than normal trigilyceride level, and a cardiovascular disease.

The invention relates a nucleic acid which is capable of regulating the transcription of human AIP-binding cassette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholesterol metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances of that are capable of modulating the transcription of the ABC1 gene. They are used in antisense therapy. Compositions comprising sequences of the invention are used to treat hypercholesterolaemia and atherosclerosis. The present sequence is human ABC1 transcription regulating DNA.
                                                                                                                                                                                                                                                                                                                                         2854

         trigiveride level, or a cardiovascular disease, involving administering a compound that modulates LNR- or RNR-mediated transfering a compound that modulates LNR- or RNR-mediated transfering a compound and sectivity or ABC1 expression or activity. In LNR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a lower than normal BDL choles-erol level, a higher than normal trigilyceride level, and a cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid sequence encoding RNA-binding polypeptide ZRPI - useful to reduce angiogenesis, increase cell proliferation or kidney cell regeneration or inhibit tumour growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         confactivated receptors (e.g. EGF and PDGR receptors) and specifically bind small nucleotar NASs (e.g. U3). Saccharomyces cerevisiae, Schizosaccharomyces pombe and human ERRI clones (see AAV04062-64) were identified using a mouse ERPI clone (see AAV04061) as probe. The isolated clones can be expressed in the usual host cells. ZPRI is expressed at an elevated level in tumour derived cells, and is a marker for growth and differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This nucleotide sequence comprises a cDNA clone coding for human 2XP1 (see AAW38457), a protein that belongs to a novel class of signalling molecules (see also AAW38454-57) that bind to

processes, including malignant transformation of cells. ZPR1, optionally expressed by gene therapy methods, can be used to inhibit the prollferation of ZPR1 associated malignant cells, or for the detection of ZPR1 suppressors and modulators of ZPR1 gene expression. Suppressors increase cell prollferation, reduce anglogenesis, e.g. to treat tumours, diabetic retinopathy, rheumatoid arthritis, psoriasis and coronary atheroma, and/or increase tubular regeneration of kidney cells, e.g. following acute

These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis. Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of digestive system, particularly cancer and cancer metastases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 21.6%; Score 30; DB 22; Length 5868; 61.5%; Pred. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic. Infections, appendictis, Hitschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention.

                                                                                                                                                                                                                                                                         The present sequence is that of the human apolipoprotein
A-IV-related protein (AA4RP) gene on chromosome 11. The gene
encodes a $66-amino acid protein (see AAB20103). AA4RP is
clifferentially expressed in obese mouse models, indicating a role
in lipid metabolism related disorders. It appears to be the human
composition of a regeneration associated protein (RA43), which is
believed to be involved in liver regeneration, and is likely to
have a similar function. It also shows 52% similarity to
apolipoprotein A-IV, and is likely to have a similar function. The
invention also provides AA4RP coNAS (see AAF30036) and polypeptides,
bialialic markers identified in the AA4RP gene and from genomic
regions flanking the gene, and methods for genotyping a nucleic
card containing 1 or more of the biallelic markers. Also provided
is a method for detecting a statistical correlation between a
biallelic marker allele and a phenotype and/or between a biallelic
marker mathod provided and phenotype and stream and provided
for an are provided and phenotype and a phenotype and such or an entitle of an entitle of the property of a present of the provided of the property of a phenotype and a phenotype and a phenotype and a phenotype and a method for detecting a statistical correlation between a biallelic
                                                                                                                                             Nucleic acids encoding apolipoprotein A-IV-related proteins (AA4RP) and bialielic markers of AA4RP, useful for diagnosing lipid metabolism related disorders and/or liver related disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17479 GGCCTGCTCCTCGTCGTCCTCGGCGCTGATGGCCGGAACAGGTGATCAGGGGCAGGCG 17420

                                                                                                                                                                                                                                               AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB5533 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polyunclectides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cerebroprotective, geuroprotective, cytostatic, Nogo receptor homologue, NGR2; NGR3; axonal growth, central nervous system; CNS; cerebral injury; spinal cord injury; stroke; demyelinating disease; multiple sclerosis;

The invention relates to a Nogo receptor homologue polypeptide, NGR2 or NGR3, comprising a 50 amino acid LRRCT sequence, a 284 amino acid NTLRRCT sequence, all given in the sequence, or a 420, 461 or 392 amino acid sequence, all given in the specification. The NGR3 protein or its binding antibody is useful for specification. The NGR3 protein or its binding antibody is useful for centron, by contracting the neuron NGR3 or its antibody, and for treating contracting the neuron NGR3 or its antibody, and for treating corphality. Spinal cord injury, stroke, comprehensive in a vector comprising NGR3 is useful for treating cerebral injury, spinal cord injury, stroke, panencephalitis, Marchiafava-Bignami disease, Spongy degeneration, campanal dagalest sease, nettachomatic leukokystrophy and knexabe's disease, Camavan's disease, Spongy degeneration, campanal dagainst NGR3, as a bait protein in a two-hybrid or three-hybrid cassay, and as a research tool for identification, threaterisation and purification of interacting, regulatory proteins. The nucleotide sequences of the invention are useful for screening for RFIP associated with cartaining NGR3 is useful for producing non-human transgenic animals. The NGR8 binding antibody is useful for isolating and purifying and the invention and/or quantization of MGR3, and for derephence of NGR3, is useful for isolating and purifying and the hyperic numbers of the invention and/or quantization of hisolating with a second campanal containing NGR3 is useful for producing non-human transgenic animals. The NGR8 binding antibody is useful for isolating and purifying and the hypersonic manner the second of the invention and/or quantization of hisolating and purifying and the hypersonic manner when the hypersonic and the hypersonic animals. The NGR8 binding antibody is useful for invention and purifying and purifying and purifying and hypersonic manner when the hypersonic animals in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Db 123799 GGGCGCTAGAAAGAGGATAGTTCTACTGATTGAGTGACAGATAAGGGTGTGGGCCAGAGA 123858
                                                                                                                                                                                                 Novel Nogo receptor homolog polypeptide, NgR2 or NgR3, useful for treating central nervous system disorder, cerebral injury, spinal cord injury, stroke, and demyelinating diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and therapeutic purposes. The sequences of the invention, vectors and antibodies are useful for treating or preventing unrequiated callular growth such as cancer and tumour growth. This polynucleotide sequence represents the genomic sequence encoding a human NgR2 protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RRV; rhesus rhadinovirus; japanese macaque virus; multiple sclerosis;

```
The present invention describes a novel rhesus macaque rhadinovirus called macaca mulatta rhadinovirus 17377 (RRV). AAC64754 represents the groups esquence, and AAB53123 to AAB53204 represent the proteins encoded by the genome sequence. The present invention also specifically claims the individual open reading frame (ORF) nucleotide sequences from the genome which encode the individual proteins, but these sequences are not given. A non-human animal infected with RRV can be used for testing the efficacy of drug in the treatment of condition associated with infection with RRV such as Kaposi's sarroma, impopronificative infection with RRV such as Kaposi's sarroma, impopronificative disorders, B-cell hyperplasia, lymphodenopathy, splenomegaly, hypergammaglobinulinaemia or autoimmune haemolytic anaemia, by administering the drug to a immuno-compromised non-human primate model for testing potential treatments for conditions by Simian Immunodeficiency Virus (SIV). RRV is useful for producing non-human primate model for testing potential treatments for conditions associated with its infection it is also useful for testing the effect capable of infection with RRV incoulating the subject with RRV and observing the effect of vaccine. Asc64755 and AAB53205 to AAB53213 represent sequence used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Jan 15, 2002 this sequence version replaced gi.1812468.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with this sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempte was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mill subclone; and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL: Sw:, SWISSPROT; Tr:, TREMBL: WP:, WORWPEP; Information on the WORWPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRI 11-JAN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping

                 IMPORTANT: This sequence is not the entire insert of clone RP11-21787 It may be shorter because we sequence overlapping sections only once, except for a short overlap.

The true right end of clone RP11-21787 is at 96717 in this sequence. The true left end of clone RP11-1277 is at 2080 in this sequence. The true right end of clone RP11-122710 is at 72980 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       74 GATAGAACCACTGATGTGAGTACCTGGGCTTGAG-CGTGGCCTGGAGATCCTGTTGACTG 132
